EAN: 4751021850636

ABOUT US

We are a manufacturer of premium winterfuels based in Latvia with 25 years of experience in producing sustainably sourced timber products. We are proud to supply UK retailers, who sell our products to the UK public. With high production capacity and a zero-waste policy, we aim to marry quality products with a process that is kind to the environment.

We operate a large 110,000 square metre manufacturing hub in Latvia which has an 18,000 square metre warehouse. By using state-of-the-art processes and historic knowledge, the consistency and quality of our products have been refined and perfected since we were established in 1996.

BE READY FOR NEW FIREWOOD REGULATIONS

The UK government guidance now states that consumers should use **‘Ready to Burn’ accredited fuels** in order to reduce harmful emissions that you may experience from timber that is above 20% moisture levels.

READYBLAZE is a fully accredited ‘Ready to Burn’ fuel so it is fully set up for years of future trading and won’t be affected by the expected law changes in selling non accredited Firewood.

Committed to sustainability and top performing products, all our Firewood is kiln dried to under 20% moisture content. This ensures that our winterfuels burn hotter and cleaner making them ideal for using on stoves, open fires and chimineas.
